About this capture

ABOUT VERMEER

We're building the first augmented reality camera flight tool.

Vermeer is designed to improve the experience of flying a camera and increase a pilot's control over the picture or video that the drone is capturing. The software is being developed by the Aerobo team, [aerial cinematography experts](#) who discovered unnecessary friction in executing the perfect shot. Their goal is to enable anyone to execute and share complex aerials for creative, personal, or professional purposes.

The Vermeer team is now searching for DJI drone pilots of all skill levels to participate in our closed beta test of the product. Selected participants will receive free access to the product 3-6 months before release in return for honest feedback on their experience.

DJI Drone Pilots can sign up for exclusive beta access below.
